

OpenText™ EMR-Link™ for Long-Term and Post-Acute Care

EMR-Link solves clinical data exchange between laboratory and imaging centers and their physician outreach customers with a unified integration solution and process automation that streamlines lab and imaging orders and results.

 **Eliminates** fax, paper and manual order interventions

 Orders and **results** start and end in the EMR

 **Streamlines** results reporting

 **Improves** tech and phlebotomist mobility

 **Better** visibility to orders and results transactions

The OpenText™ EMR-Link™ solution not only offers integration and seamless data exchange for lab and imaging service providers, but includes the benefit of unique partner relationships with the top long-term and post-acute care Electronic Medical Record (EMR) providers in North America. Each of these partners embeds EMR-Link's electronic orders and results modules into their integrated platforms enabling their end-user clinicians to place electronic orders at the point of care, and ensure electronic results are delivered into patient or resident charts.

Laboratory or imaging service providers connecting into a senior care facility using these partner EMRs must first integrate with OpenText EMR-Link.

Features

- Electronic orders and results
- Connect to any long-term care EMR
- Full automation
- Embedded order validation
- Long-term care EMR and outreach experts
