

Streamlining Outreach Patient Registration

Automate Out-Patient Registration in the Lab for

Time and Cost Savings

As hospital labs increase outreach efforts to **maximize orders from clinics and physicians outside the hospital system**, the demand for resources to support ordering volume rises.

Over **4000** laboratory tests are available

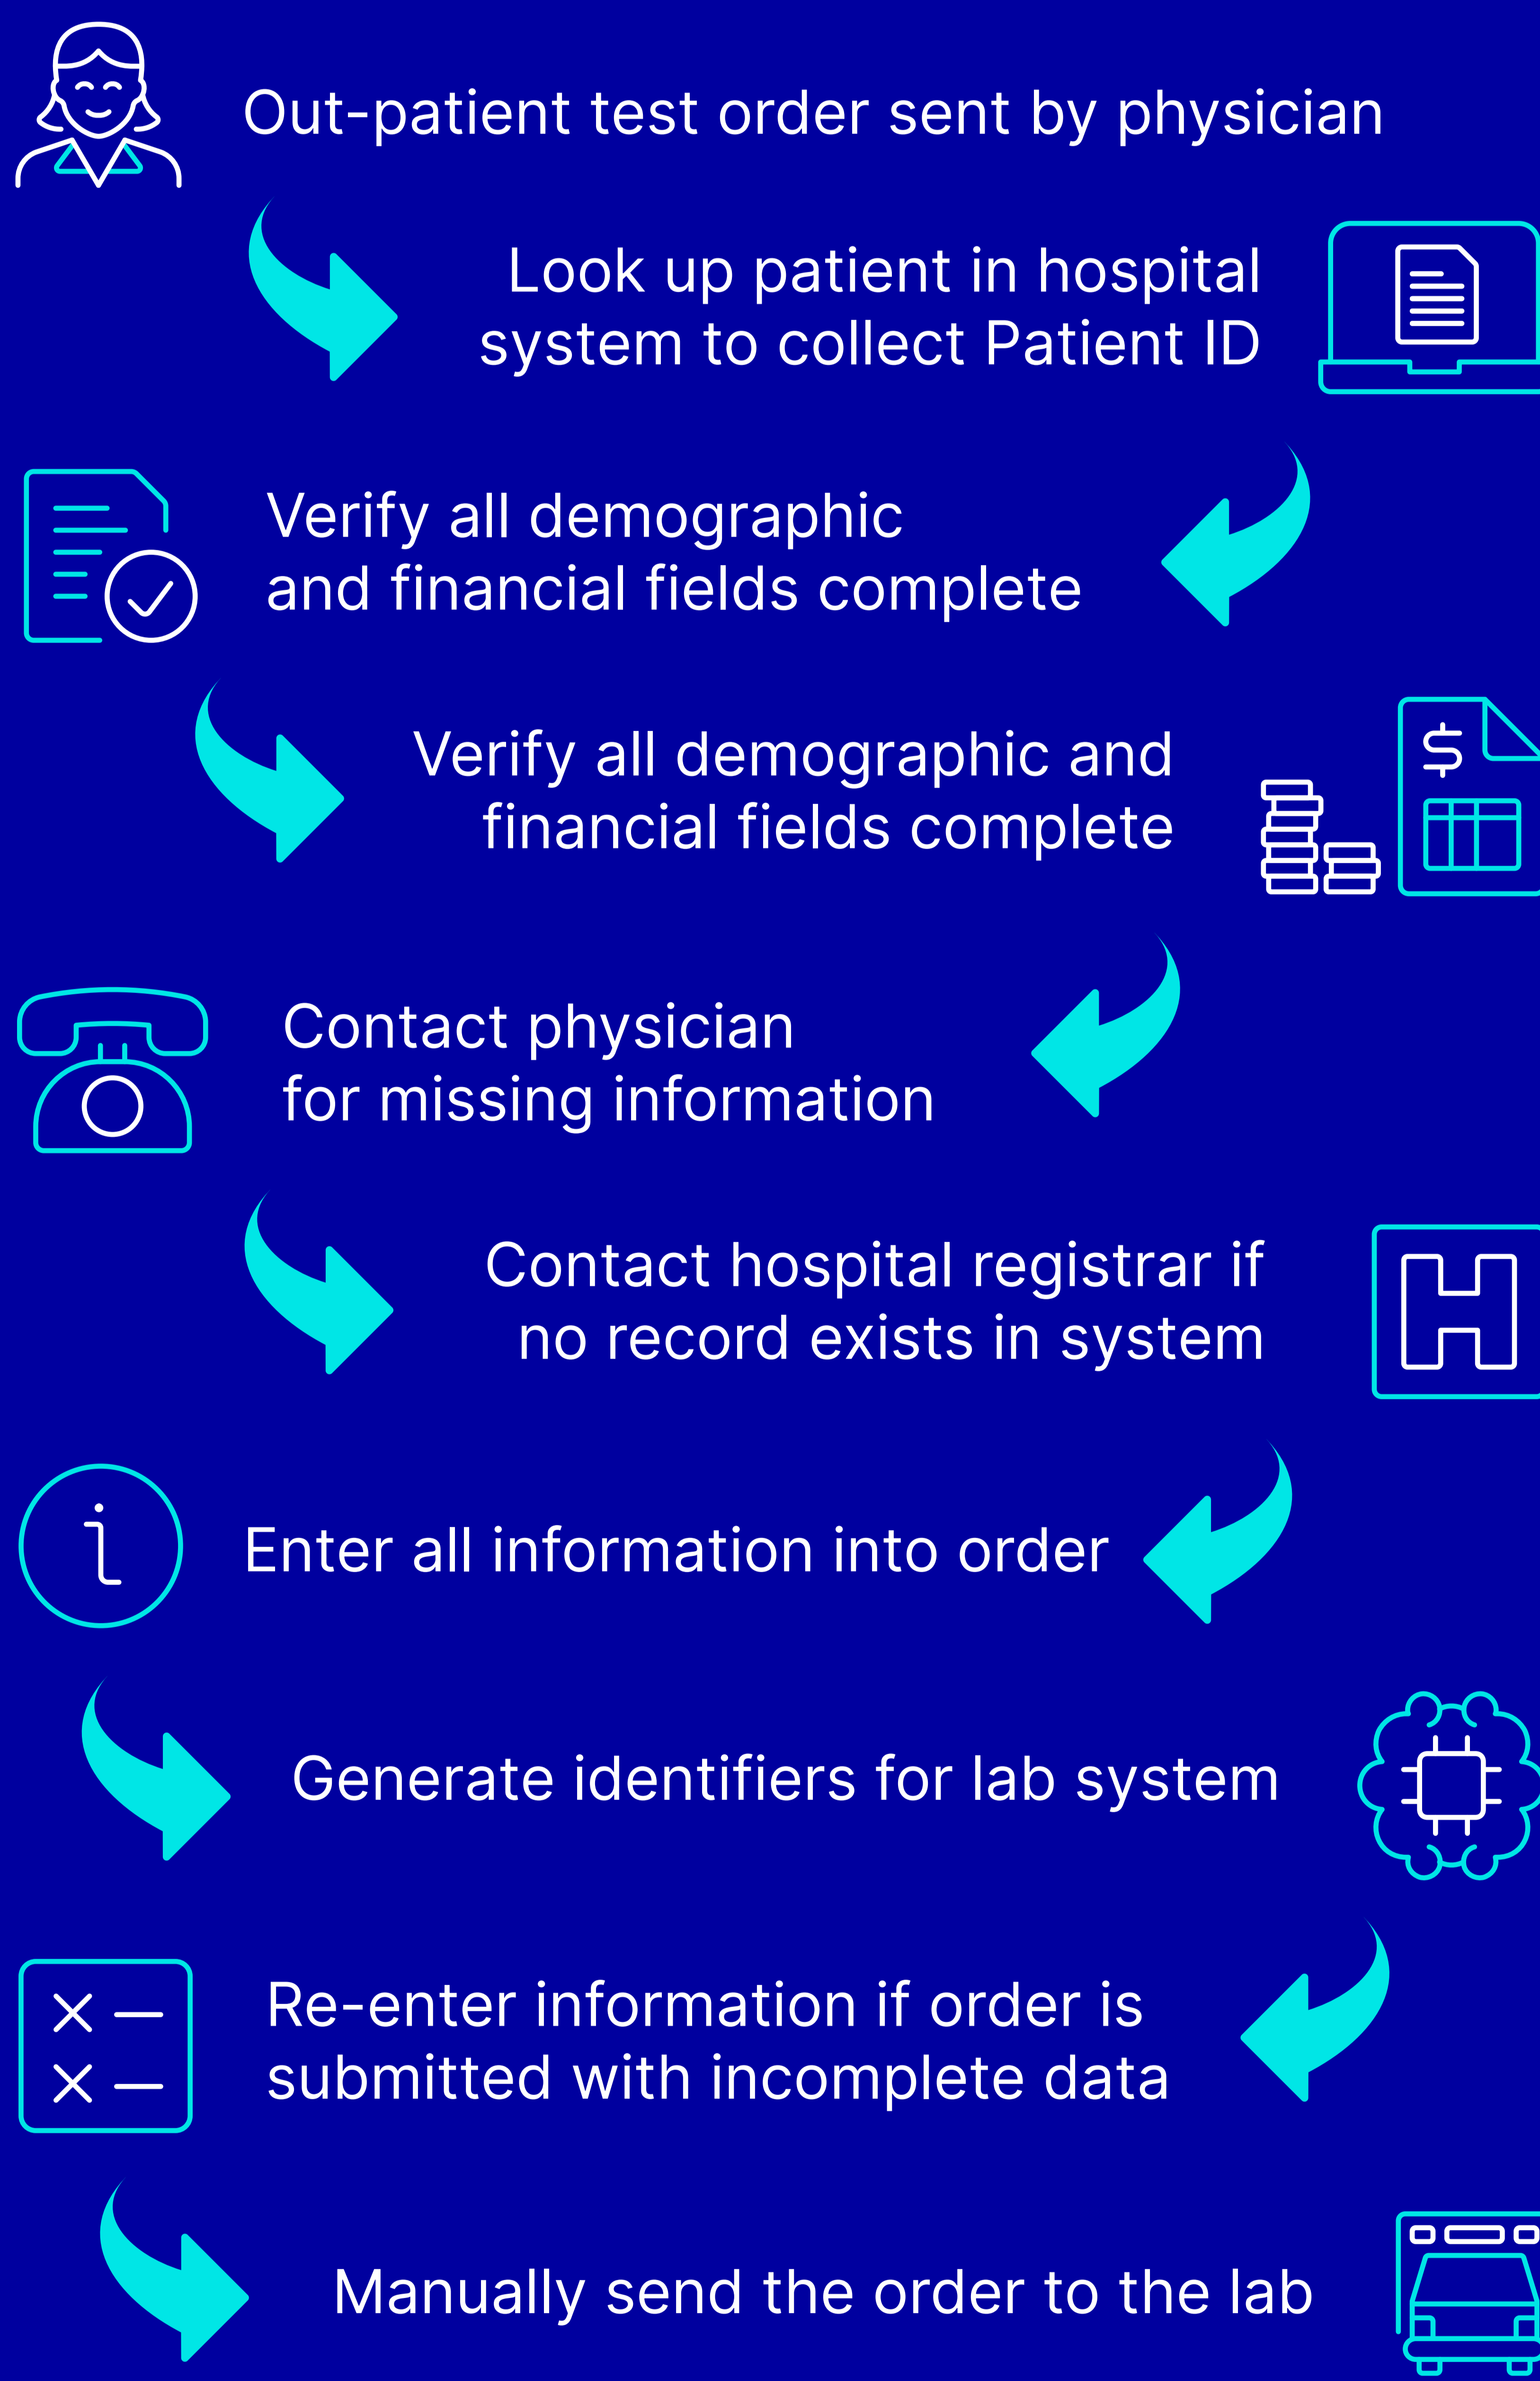

500 routinely ordered by physicians

Processing the volume and complexity of today's diagnostic testing has led to greater automation within the lab.

Creating interoperability between the physician, lab and the hospital system to ensure streamlined patient matching and registration is necessary to **further optimize workflow and increase accuracy.**

Manual process to prepare out-patient order for lab system

Automatic patient registration streamlines accessioning and pre-analytic workflow:

- ✓ Improved accuracy of data
- ✓ Faster time to process sample
- ✓ Error-free return of results to records
- ✓ Correct, complete information for billing

OpenText™ EMR-Link™ streamlines and automates registration of out-patients from clinics and care centers outside the hospital, optimizing lab and imaging order intake and minimizing errors, processing delays and staff time. Access our Automated Patient Registration data sheet to learn more.
