

Compare OpenText Managed Services against DIY integration

Successful B2B and application integration requires a diverse set of capabilities — and an even more diverse set of skills.

To solve this challenge, OpenText has packaged a breadth of enterprise integration capabilities into a Managed Service offering to meet the requirements of modern, API-led integration use cases. This allows for legacy system integration and enables organizations to modernize at their own pace.

The Managed Services difference

The flexibility of Managed Services allows organizations to partner with OpenText as an extension of their integration competence center. This agile approach complements and scales existing integration capabilities without the worry of purchasing new technology, considering compliance or hiring and training people with the right skills.

OpenText not only offers a lower total cost of ownership, but future-proofs an organization's integration strategy—and business.

See how OpenText Managed Services stack up against do-it-yourself integration tools, such as iPaaS and EAI middleware.

Capabilities			
Integration	OpenText	iPaaS	EAI middleware
